

SAVEETHA SCHOOL OF ENGINEERING
CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS

LIST OF EXPERIMENT 4

4) Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

SOL

AIM:

To design and implement a simple cloud-based Car Booking Reservation System using Zoho Creator and deploy it as a Software as a Service (SaaS) application, demonstrating relational data management via multi-form lookup integrations, multi-user simulation, and remote database transactions through an internet web browser.

PROCEDURE:

- Sign In: Sign in to the Zoho Creator cloud platform using the registered student account credentials.
- Application Shell: Create a completely fresh standalone application by selecting the Create from Scratch option and name it SaaS Experiment 4 Car Booking.
- Form 1 (Customers Table): Design the first data entry form named Customers, adding a Name field labeled Customer Name and a Phone field labeled Contact Number. Publish and save the form setup.
- Form 2 (Cars Table): Design the second data entry form named Cars, adding a Single Line text field labeled Car License Plate and a Drop Down menu labeled Car Model containing vehicle inventory profiles (*Suzuki Swift, Hyundai i20, Mahindra Thar*). Save the form configuration.
- Form 3 (Bookings Relational Table): Create the third form named Bookings to handle the relational scheduling dependencies:
 - Drag a Lookup Field linking directly to the Customers form, choosing Customer Name as the active display criteria.
 - Drag a second Lookup Field linking directly to the Cars form, choosing Car License Plate as the active display criteria.
 - Add a Date field labeled Booking Date and a Number field labeled Rental

Car License Plate	Car Model
DL-01-AA-9999	Mahindra Thar
AP-27-CC-5678	Hyundai
TN-07-BY-1234	Suzuki Swift

Duration (Hours)
to log transaction
variables.

- Report Generation:
Automatically
configure
standalone list
view reports for
Customers, Cars,

and Bookings to enable multi-tenant data indexing, sorting, and administrative record modification via the cloud.

- Deployment & SaaS Access: Click on the blue Access This Application button to securely publish and host the complete car rental portal live onto the Zoho cloud infrastructure.
- Functional Cloud Testing: Verify operational reliability by sequentially inserting 3 unique sample entries into the Customers form, 3 entries into the Cars form, and executing cross-table tracking lookups inside the live Bookings interface.

SNAPSHOTS:

Select Customer	Cars	Booking Date	Rental Duration (Hours)
Meena Krishnan	DL-01-AA-9999	14-Aug-2026	9
Kiran Kumar	TN-07-BY-1234	13-Aug-2026	4
Carita Ram Charan	AP-27-CC-5678	29-Jul-2026	5

RESULT:

A relational cloud-based Car Booking Reservation System application was successfully developed, integrated, and deployed using the Zoho Creator SaaS development environment. The application operated fluidly over the internet via a standard web browser interface without requiring local desktop infrastructure, effectively validating key multi-tenant Software as a Service (SaaS) deployment concept.
